

You already know the 2024 Child Neurology Society Annual Meeting is **THE** event of the year, and this year's event in San Diego on November 11–14, California, is shaping up to be the best one yet – largely because of the new choose-your-own-adventure-style scientific program.

As in years past, the four-day program is jam-packed with educational events that will help you grow professionally, elevate your practice, and earn valuable continuing medical education (CME) credits. This year, we're excited to introduce three new focused learning tracks and varied learning platforms.

Multiple focused learning tracks to deep dive into various field specialties and topics

This year's scientific program is rich in variety. With three unique learning tracks – *Clinical Practice*, *Research Advances*, and *Leadership and Career Development* – you can deep dive into the topics that interest you the most.

Explore data-driven summaries on the latest diagnostic practices and gain valuable insights through illustrative case studies on everything from genetic testing to the effects of global socio-cultural factors on care. Delve into public health or translational neuroscience research and learn about future applications, the lifecycle of drug development, and how to implement a clinical registry. Or engage in a lively discussion about leadership, learn how to harness technology for career growth, and discover how to find NIH funding opportunities.

These are just a few of the hot topics we'll cover. Whatever you're looking to learn, we've got you covered.

Varied learning formats to appeal to different audiences and learning preferences

If there's one thing we all know, it's that we don't all learn the same way. This year's Scientific Program will accommodate all learning styles.

Choose from small-group workshops, discussion-based seminars, traditional lectures, and presentations – many are eligible for continuing medical education (CME) credits.

Because programs are tailored to various career stages and practice types, there's

something for everyone – medical students, residents, seasoned clinicians, researchers, and educators alike.
