

Copyright Ownership

All abstracts and posters submitted to the Child Neurology Society (CNS) for presentation at the CNS Annual Meeting or other CNS events remain the intellectual property of the authors. By submitting their work, authors grant CNS a non-exclusive license to use, reproduce, publish, and distribute the content in any format, including print and digital publications, the CNS website, educational resources, and promotional materials.

Usage Rights

CNS may publish accepted abstracts and posters on the CNS website, in affiliated journals, or through other digital and print channels associated with CNS.

Authors retain the right to reuse their work for other purposes. When applicable, authors should acknowledge that the work was originally presented at a CNS event.

Author Responsibility

Authors are responsible for ensuring that submitted content is accurate and does not infringe upon the rights of any third party.

Authors are also responsible for obtaining any necessary permissions to include copyrighted materials, images, figures, tables, or other third-party content in their abstracts or posters.

Permission Requests

Requests from third parties to reuse or republish content from CNS abstracts or posters should be directed to the Child Neurology Society. Depending on the rights associated with the requested material, CNS may refer the request to the respective author(s).

Publication and Dissemination

Accepted abstracts may be made available on the CNS website and may be published in affiliated journals or included in other CNS educational resources. Posters may also be made available through CNS digital or educational platforms.

This allows CNS to broadly disseminate research presented at its meetings while respecting the intellectual property rights of the authors.

Embargo Policy for Abstracts and Posters

Accepted abstracts and posters are under embargo until 9:00 AM Eastern Time (ET) on the day before the Child Neurology Society Annual Meeting begins.

Prior to the embargo being lifted, CNS may publicly share abstract titles, author information, presentation details, and other program information on the CNS website, in the meeting program, mobile app, or other meeting materials. Authors may also share the abstract title, acceptance status, and presentation details.

The scientific content of the abstract or poster, including data, results, and conclusions, should not be publicly disseminated before the embargo is lifted. This includes publication or distribution of the abstract or poster content through press releases, media coverage, institutional communications, websites, social media, or other public channels.

At 9:00 AM ET on the day before the Annual Meeting begins, the embargo is lifted, after which authors may publicly share and discuss their research.
